

Albany Truck Sales
is excited to offer the
FSX_DPF
Cleaning system to all of our customers

- **FSX** equipment provides the best cleaning available for diesel particulate filters and adheres to all specifications set by the original manufacturer.
- Inspects, cleans, tests, and returns filters to the customer. Filters are recorded by customer name, filter serial number and test results, We do not exchange or substitute filters.
- When we are finished processing the DPF we know the exact condition of the filter and have absolute confidence and knowledge of the level of recovery.
- **FSX** has an overall average cleaning success of about 95%, **FSX** cannot guarantee that we can achieve recovery of all filters as filters can fail for a variety of reasons.
- The **FSX** cleaning system is located at our Albany Facility, but we can pick up and delivery to and from our other locations or if you prefer to bring the truck in and have it removed.
- 72 hour average turn around time depending on the stage of cleaning required and return delivery point.
- Prices will be provided upon request and may vary due to filter size, filter design and the stage of cleaning required. The average cleaning costs are between \$350.00 and \$500.00.
