

VEHICLE INSPECTION SYSTEM

Stop spending hours jacking up and crawling under your vehicle looking for loose and worn parts.

Have our experience staff check your chassis and steering components and brakes in no time.

What is VIS-Check?

VIS-Check is a diagnostic machine that checks the brakes, steering and suspension of heavy trucks, then produces a Safety and Efficiency Report to guide maintenance activities.

Why focus on undercarriage diagnostics?

The undercarriage of a vehicle is where the weight of a vehicle meets the road. Safety, fuel economy and tire life are all compromised if undercarriage components are not in top working condition.

Why use a machine to perform undercarriage diagnostics?

- Faster by automating brake testing
- Traceable by producing an inspection report
- More accurate by improving inspection method
- Test foundation brakes to federal requirement
- Recreate road conditions safely in the shop
